

Coomera Connector Stage 1 – North

Project Description:

The Coomera Connector, will provide an alternative transport route between Loganholme and Nerang. Stage one of the project, spanning 16 kilometres between Coomera and Nerang, addresses growing congestion on the M1 by providing additional capacity for local traffic and improved crossings over the Coomera and Nerang rivers.

Once complete, the project will reduce congestion, improve safety, and enhance network efficiency, offering more reliable travel times and reducing pressure on the M1.

Our Role:

Construction Sciences was awarded the construction materials testing contract for Stage 1 North of the Coomera Connector. Testing is delivered by the Gold Coast (Molendinar) Laboratory to ensure all materials meet the project's high-quality and safety standards.
